Heads up!

If you are connecting to your uni database in uni or at home, please check the following with the files you have downloaded. They need to follow the steps below in order for the database's data to be displayed.

Context.xml *(META-INF > context.xml)*

- if you are accessing your own database from your account, change:
    - **username = "c[YOUR_STUDENT_NUMBER]"**
    - **password = "[YOUR_BIRTHDATE]"** DDMMYY
- depending upon whether you are connected in uni or home, the 'url' attribute needs to be changed.
    - url = "jdbc:mysql://**localhost:3306**/SENG2050_2017" *{UNI}*
    - url = "jdbc:mysql://**localhost:30001**/SENG2050_2017" *{HOME - 30001 (or whichever port chosen) because that is the port we are tunneling through}*

DatabaseFunctions.java *(WEB-INF > classes > nuboardpkg > DatabaseFunction.java)*

- Check connection comments in file

Configures.java *(WEB-INF > classes > nuboardpkg > Configure.java)*

- Make sure your student number is the connection
